

Chinese willing to support Beidou navigation system

Shuang Sha

April 17,2018

This article mainly describes that Chinese are now eagerly looking to its own navigation app that's expected to debut next month, and the development history and future prospects of the system. This system is named for the Big Dipper constellation. Some smartphones that don't have the chip of navigation system can't use the Beidou system immediately. The chips installed in the smartphone is necessary, if you want to use the system, you could buy a new smartphone. The project has carried out 24 years started in 1994. It began to serve China in 2000 and the Asia-Pacific region in 2012. By 2020, the value of the system business will rise quickly and be expected to surpass 400 billion yuan.

We have own navigation system, and is not subjected to limitations by the U.S. GPS. Technology is in its own hands, and the official secrets is avoided to let out, and nation's security is able to safeguard. China can improve its competitive power, and avoid to be bullied by other countries. In my daily life, I require to improve my competitive power, and have advantage in the competition of talents, and make me life happiness.
